

Case Study – Healthcare

Client

Epsom and St Helier University Hospitals NHS Trust

Project Name

Ferguson House New Lift
St Helier Hospital

Duration

16 Weeks

Value

£470,000

Contract Administrator:

Epsom and St Helier University Hospital
NHS Trust

Architect:

Epsom and St Helier University Hospital
NHS Trust

Quantity Surveyor:

Love Jenkins Associates

M&E Consultant:

Epsom and St Helier University Hospital
NHS Trust

Structural Engineer:

Thomason's engineering

Description

Construction of a brand new bed lifts within a constricted internal court yard between Blocks D & E. Works include installation of structural steelwork, new cladding, roofing, windows and fit out works inside including new electrics, fire alarms, new entrance corridor, partitions and flooring.

This work was undertaken in a live environment over the 5 floors of Ferguson House at St Helier Hospital in Carshalton which meant that noise, dust and vibration needed to be kept to a minimum and good communications was essential with the adjacent departments.

Testimonial

We have engaged Storm on several projects in recent years through the open tendering process and have found them to be professional, approachable and cooperative.

Their staff are well managed, working well within the live hospital environments with a desire to achieve a good finish with least disruption to services and I have no hesitation in inviting Storm to tender for further capital work at the Trust..
